1. Purpose of this document

HMRC is moving the processing of all customs declarations from its Customs Handling of Import and Export freight (CHIEF) system to the **Customs Declaration Service (CDS)**. From 4 June 2024, the CDS will be the UK's new single customs platform, providing a modern, secure IT platform supporting businesses to make import and export declarations into and out of the UK.

This document provides consolidated guidance on best practice for submitting and managing export declarations submitted through the CDS. This document should be used alongside the more detailed [CDS guidance pages](#) and the supporting CDS communication pack on GOV.UK, that includes:

- [A declarant checklist for CDS exports](#) – providing a step-by-step guide to the key actions you will need to take to move to the CDS.
- [Example declarations for exports from Great Britain to the rest of the world](#) - to help you complete your CDS export declarations.
- [CDS customs clearance instructions for exports videos](#) – taking you through the key steps required to complete an export declaration.
- [Key differences between CHIEF and the CDS](#) – pointing out key ways in which your experience using CDS will differ from that with CHIEF
- [CDS known error workarounds](#) – please check this document for full technical details of ongoing workarounds to help you submit customs clearance requests or customs declarations through CDS.

2. Version Control

Version	Date	Updates made
V1	01/03/2024	Issuance of first iteration of document
V1.1	28/03/2024	• Section 3, row 2: Amendment to reference the locations table in section 4.3, as opposed to 4.2 • Section 3, row 10: Added in a new row; 10, on recommended data element completion to avoid departure irregularities for VAT Zero export declarations.

		• Section 3, row 11: Added a new row; row 11, on Assumed Departures • Section 3, row 12: Added a new row; row 12, on usage of 'TRANS' as an AI statement in DE 2/2. • Section 3, row 13: Added a new row; row 12, on usage of Transport Mode 5 in DE 2/2. • Section 3, row 14: Added a new row; row 14, on recommended data entry for DE 6/10 • Section 3, row 15: Altered wording for clarity • Section 3, row 16: Added that process applicable if are receiving a route 6 or 3 'held' message. • Section 3, row 20: Added a new row to explain best practice around requirements to delete the first row of a CHIEF declaration • Section 3, row 23: Amended wording for clarity • Section 3, row 25: Added a new row; row 25, on guidance for submitting DUCRs using CDS Exports User Interface • Section 4.1, row 1: Correction to clarify steer on amendment of declaration to remove GVMS details. Steer added on what to do if declarants cannot amend their declaration. • Section 4.1, row 4: Added in the names of the Dover Deps impacted in row 4 • Appendix 8.2: Corrected the DMS codes in this table. • Appendix 8.3: Added appendix table as required for Section 1, Row 10. <i>*Please note in subsequent versions the above rows may have changed number*</i>
V1.2	16.5.24	• Section 3, Row 3: Added new row, row 3, on submission of standard export declarations exiting via GB form inventory linked locations. • Section 3, Row 9: Row 9 was moved from the end of the table to improve grouping of issues. • Section 3, Row 10: Added a new row, row 10, on MUCR size

		• Section 3, Row 18: Added a new row, row 19, on the meaning of a DMSACC message. • Section 3, Row 19: Added a new row, row 20, on the meaning of a DMSRCV message. • Section 3, Row 29: Amended guidance on use of 'VATZ' in DE 6/17 • Creation of new Section 4: Guidance on Large MUCR Best Practice
--	--	--

3. Dos and Don'ts for successfully submitting and managing export declarations

You should follow the below best practice guidance when submitting declarations and conducting follow-up activity. If the best practice advice has not been followed, then please take the remedial actions suggested in the 'Actions to take...' column.

Table 1: Best practice guidance for submitting declarations and actions to take to rectify issues.

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
<i>I need to submit an exports declaration for an inventory linked location where GVMS is in operation for imports only</i>				
1	If you are submitting a CDS exports pre-lodged declaration for goods exiting via one of the inventory linked locations where GVMS is in operation for imports only (see Section 4.2), <u>do not use a GVMS Goods Location Code in DE 5/23.</u> If you have already used a GVMS goods location, amend the declaration before goods physically arrive at the Port.	If you do not amend the declaration before goods physically arrive at the port, your declaration will be rejected upon arrival and a DMSREJ notification (see section 8.2) is returned.	We recommend that when you receive a DMSREJ, you should check the status of your declaration using the Declaration Interrogation Service (DIS) or the Inventory Linked Exports (ILE) query service. SOE 5 will be returned for a declaration rejected upon arrival. You will need to 1. Submit a new declaration using the same Declaration Unique Consignment Reference (DUCR) into the	N/A

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
			CDS, but with a new Local Reference Number (LRN) if your software allows this. a. Or, if software does not allow this, submit a new declaration with a new DUCR reference (e.g. add an extra character to the end) 2. Inform the Designated Export Place (DEP)/carrier, and ask for a re-arrival of the same DUCR or arrival of the new DUCR to be sent. Refer to section 5, table 3, row 3, if your DUCR has been consolidated within a Master Unique Consignment Record (MUCR).	
<i>I need to submit an exports declaration for an inventory linked location where GVMS is in operation <u>for both imports and exports</u></i>				
2	If you are submitting a CDS exports pre-lodged declaration for goods exiting via one of the inventory linked locations where GVMS is also in operation for exports as well as imports (<u>see Section 4.3</u>),	If you do not amend the declaration before goods physically arrive at the Port, your declaration will be rejected upon arrival and a DMSREJ notification is returned.	We recommend that when you receive a DMSREJ, you should check the status of your declaration using DIS or the ILE query service. SOE 5 will be returned for a	N/A

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
	<u>do not</u> use the GVMS Goods Location Code. If you have already used a GVMS goods location, amend the declaration before goods physically arrive at the Port. If your goods are being routed via a GVMS location, submit your declaration with the full GVMS details (including the GVMS Goods Location Code).		declaration rejected upon arrival. You will need to 1. Submit a new declaration using the same DUCR into the CDS but with a new LRN if your software allows this. a. Or, if software does not allow this, submit a new declaration with a new DUCR reference (e.g., add an extra character to the end) 2. Inform the DEP/carrier and ask for a re-arrival of the same DUCR or arrival of the new DUCR to be sent. Refer to section 5, table 3, row 3, if your DUCR has been consolidated within a MUCR.	
Best Practice for CDS exports, to bed into long term declarant processes				
3	<u>Do not</u> submit an arrived standard export declaration (EX/A) for goods that will be exiting GB via an inventory linked location	Arrived declarations should only be submitted for goods that will be exiting GB via an arrived GVMS location or by authorised CSE traders. When your goods are arrived at the inventory linked location, a response message may	Ask your CSP/ Loader to re-arrive your UCR. If this does not elicit a response, you will need to cancel your declaration and resubmit a new declaration using the same DUCR with a new LRN and	

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
		not be returned to the CSP/Loader and your goods may be stuck at the border.	reassociate, or if your software does not allow re-use of a DUCR, create a new DUCR.	
4	<u>Do</u> ensure your declaration contains a valid and correct CDS Goods Location Code (GLC) Please pay particular attention to the use of a GVMS Location Code as referenced in row 1 and 2 of this table.	A Goods Location Code (GLC) is mandatory for exports, and your declaration may be rejected on arrival if it is not correct / does not exist in the CDS tariff.	Resubmit the declaration with a valid GLC .	N/A
5	<u>Do not</u> put MUCR details in the DUCR field or vice versa, i.e. In data element 2/1 (equivalent CHIEF box 40) quoting MUCR reference in previous document type code "DCR", and DUCR reference in previous document type code "MCR".	Your declaration will be rejected and the MUCR will be unusable. The CDS renders the MUCR unusable and will reject the declaration on arrival. This means that even if a new declaration is submitted with the MUCR and DUCR quoted against the correct type codes afterwards, this new declaration will still be rejected on arrival.	Submit a new declaration with a new MUCR and, if applicable, associate all non-errored DUCRs into this new MUCR.	KEL-614
6	<u>Do not</u> reuse a live CDS DUCR reference for a subsequent declaration.	The DUCR will be rejected and the status of the original (successful) declaration will be overwritten with a rejected status. If the same CDS DUCR is incorrectly submitted for a subsequent declaration, the duplicate DUCR will be rejected and overwrite the status of the original declaration. As a result, operations such as movements, queries, and departures are not permissible as the	Submit a new declaration with a new DUCR (see <i>table 3</i>).	KEL-556

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
		system views the DUCR as having been rejected.		
7	If you create consolidations, <u>do not</u> include more than 1 hyphen in the MUCR field.	Your MUCR will not be arrived (and not given Permission To Progress (P2P)). If you use more than one hyphen, the departure messages will fail, and your goods will encounter delays.	Request that your Carrier removes the MUCR reference from the Unique Consignment Number (UCN) on the inventory. Associate the underlying DUCRs into a new MUCR using the correct MUCR format i.e., no more than 1 hyphen. You can do this using either: • CDS functionality provided by your software provider/CSP or, • The Exports Movement Service on gov.uk Or contact the owner of the MUCR and request for this action to be completed. Add the new MUCR reference to the UCN on the inventory.	N/A
8	If you create consolidations, <u>do</u> finalise and close the MUCR before arrival at the UK border. <u>Do not</u> provide the MUCR reference to the Carrier	On arrival, your MUCR will not gain P2P automatically and may remain in an 'Open status' (SOE 0) if you close it after arrival. Further actions will be	If, for any reason, a MUCR is not closed and has been arrived at the frontier, close the MUCR ASAP and inform the Loader.	N/A

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
	until it has been finalised and closed.	required which may cause delays.	The MUCR may need re-arriving to gain clearance status.	
9	When creating consolidations, <u>avoid</u> creating a consolidation with more than 99 DUCRs. <i>Please also refer to section 4. Large MUCR Best Practice</i>	Your declarations may take longer to process by CDS than desired.	N/A	TBC
10	<u>Do not</u> create DUCR Part numbers in your CDS export declaration.	Your DUCR cannot be arrived (no P2P). CDS arrival messages do not cater for DUCR Part numbers. You cannot create additional declarations using further part numbers in CDS	Submit a new CDS declaration without a DUCR Part number.	N/A
11	<u>Do not</u> assume SOE D is the final status for a departed declaration DUCR as this is an interim status. SOE 22 is the final state for successful, departed declarations. <i>See appendix 8.1 for a full breakdown of SOE statuses.</i>	In certain scenarios you might not receive a DMSEOG notification. This does not necessarily mean that your declaration/goods have not been departed. If unsure, check the status of your declaration DUCR to confirm status 22. <i>See appendix 8.2 for a full breakdown of the CDS DMS Notifications.</i>	N/A	N/A
12	<u>Do</u> correctly enter data elements 3/10, 6/12, 6/14 & 6/16. <i>N.B. See appendix 8.3 for breakdown of the above data elements.</i>	Incorrect values entered into any of these declaration fields means that exit confirmation is not received by DMS for the declaration. This prevents the system moving the declaration / movement to a departure status (SOE22) and blocks the issuing of a 'Exit of Goods' Message	In this scenario the exporter should use commercial evidence as official evidence of export to VAT zero rate goods, find guidance on proof of export for zero rating in specific circumstances. No post clearance actions are needed	N/A

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
		(DMSEOG). In these circumstances, the declaration will be invalidated after 150 days. <i>N.B. See appendix 8.2 for a full breakdown of the CDS DMS Notifications.</i>	to depart the declaration and no contact to HMRC is required, and so long as commercial evidence is held the declaration / movement can be considered finalised. <i>N.B. see point 18 in this table for further VAT zero guidance</i>	
13	Do be aware that, unlike CHIEF, CDS does not give a declaration "assumed departure" status after 15 days of clearance without a departure message. N.B. a DMSGER notification is generated after 45 days with no departure message sent. <i>See appendix 8.2 for a full breakdown of the CDS DMS Notifications.</i>	N/A	Ensure your declaration is correctly departed via GVMS or Inventory linked location.	N/A
14	Do not use 'TRANS' AI statement in DE 2/2 unless your goods are moving under transit procedures via GVMS, and you have quoted a goods location code ending in GVM in DE 5/23.	Your declaration will be auto-departed on clearance and this will cause issues at inventory linked locations. Also, a specific DMSEOG notification will not be received where the TRANS AI code is included.	Only 'TRANS' AI statement with a goods location code ending 'GVM'. If your UCR is impacted by this issue at an inventory linked location, raise a G-form to request Manual Release. A G-form can be completed using the "report a problem when using the CDS". Your software developer has been issued guidance and can advise on how to	

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
			complete the G-Form to request manual release.	
15	Do not use Mode of Transport 5 in DE 7/5 unless you are an authorised postal operator which is governed by the Universal Postal Union, i.e. Royal Mail Group.	Your declaration will be auto-departed on clearance and this will cause issues at inventory linked locations.	If your UCR is impacted by this issue at an inventory linked location, raise a G-form to request Manual Release. A G-form can be completed using the "report a problem when using the CDS" . Your software developer has been issued guidance and can advise on how to complete the G-Form to request manual release.	
16	Do not declare DE 2/3 (quantity) as zero when submitting a declaration for licensable goods unless you want to cancel a reservation amount for that license.	Your declaration will be invalidated on arrival.	You will need to submit a new declaration with the same DUCR but a new LRN, quoting a non-zero quantities in DE 2/3.	
17	Do not declare DE 6/10 (number of packages) as zero when exporting goods via fixed transport installations such as gas and electricity.	Your declaration will be invalidated on arrival.	You will need to submit a new declaration with the same DUCR but a new LRN, quoting a quantity of 1 in DE 6/10.	
18	Do treat DMSACC as legal acceptance of a declaration	DMSACC indicates legal acceptance by HMRC and is only issued when the goods have been presented and the declaration has been arrived successfully.	N/A	
19	Do not treat DMSRCV as acceptance of a pre-lodged declaration.	DMSRCV is issued to the submitter to inform them that a pre-lodged	N/A	

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
		declaration has been registered and has passed initial validation. Validation re-occurs when the declaration is arrived, and subsequently the declaration is legally accepted at this point. NB: On occasion, a declaration may get rejected at this point.		
Important best practice when managing GVMS declarations				
20	For your arrived declaration to be departed in CDS, you must tell the haulier to quote all DUCRs in the GMR (Goods Movement Reference) as per guidelines*. <i>*This excludes use of TAD easement, see row 17.</i>	If your DUCR reference is not included in the GMR, CDS cannot depart your declaration, instead, your declaration will be invalidated due to non-departure and may no longer appear on any reports.	If you are missing a departure message for a declaration which was cleared and physically departed, you can use commercial evidence to VAT zero rate goods or claim relief from customs special procedures with duty liabilities impact. C1602s should only be requested for Excise goods, where a departed message has not been received because GVMS processes were not followed correctly.	N/A
21	For your pre lodged declaration to be arrived and departed in CDS, you must tell the haulier to quote all DUCRs in the GMR (Goods Movement Reference) as per guidelines.	If your DUCR reference is not included in the GMR, CDS cannot arrive your declaration, instead, your declaration will be invalidated after 30 days due to non - presentation and will no longer appear on any reports.	If you do not receive a DMSCLE for a declaration that was physically departed via a GVMS location, you must follow C1603 procedures in order for your declaration to be retrospectively arrived and departed.	N/A

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
22	<u>Do not</u> use TRANS AI code within Data Element 2/2 unless the goods* are being exported via GVMS arrived locations and you or your haulier are authorised to use the Transit easement. It should be noted that if you declare TRANS code within DE 2/2 and use the Transit easement, a DMSEOG cannot be generated by CDS but your declaration will be updated to departed status (SOE 22). *excluding excise	Traders who are authorised to use the TAD easement are able to obtain evidence from NCTS that the CTC procedure has been discharged. Exporters who require confirmation of departure, should contact their declarant and ask them to provide a print from a HMRC system showing that their DUCR has SOE 22 or use the Exports User Interface https://tax.service.gov.uk/customs-movements	If you have not received a DMSEOG and require confirmation of departure, you will need to obtain a print from a HMRC system showing that your DUCR has received SOE 22.	N/A
<i>Important practice to follow until the date of the last declaration on CHIEF</i>				
23	<u>Do not</u> submit a declaration into the CDS for a shipment that already has an existing CHIEF pre-lodged declaration. A declaration can only be live in one system at a time.	Your declaration may not be arrived (no P2P). If the CDS declaration is subsequently cancelled, the CHIEF declaration cannot be arrived. If you revert to CHIEF for a movement where a declaration has already been submitted in CDS, you cannot reuse the same DUCR.	Cancel the declaration on CHIEF and then submit a new CDS declaration using a new DUCR.	N/A
24	<u>Do not</u> provide your CHIEF Declaration Movement Reference Number (MRN) to your Loader/Carrier for arrival.	Your declaration cannot be arrived and will not gain P2P. The CDS does not support the use of a declaration MRN as a reference to arrive goods at inventory linked locations.	Provide the CHIEF DUCR reference to your Loader/Carrier instead and ask for the MRN to be replaced by the DUCR reference.	N/A
25	<u>Do not</u> assume your MUCR has P2P solely from the CDS status.	You must check the MUCR Route and Status in CHIEF and CDS to locate any uncleared DUCRs within the MUCR where	Resolve all uncleared DUCRs (and MUCRs if applicable) within your MUCR in both CHIEF and CDS to achieve P2P.	N/A

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
		P2P has not been achieved after arrival.	Inventory systems operate dual running and MUCR-level P2P will only be delivered once all declarations have P2P.	
26	<u>Do not</u> delete the first line item in a CHIEF declaration if there is a legitimate reason to do so and your declaration DUCR will be consolidated into a MUCR. If there is a legitimate reason to delete the first line item <u>do</u> instead submit a new declaration.	This is because the arrival of the MUCR will not elicit any response from exports dual running even though the MUCR may be cleared in CHIEF. Your goods will be held at the Border until Manual Release is granted. However, if you do submit a new declaration the MUCR will be successfully arrived.	Raise a G-form to request Manual Release. A G-form can be completing using the " report a problem when using the CDS ". Your software developer has been issued guidance and can advise on how to complete the G-Form to request manual release.	KEL-619
Workarounds in place until known CDS system errors are fixed				
27	<u>Do not</u> rely solely on the DIS for checking the status of your declaration. You are advised to also use the ILE query service.	When interrogating the status of your declaration using the DIS query service, certain reference data may be misleading. These include the declaration route, the overall declaration package count and the declaration received and accepted timestamps.	N/A	KEL-555
28	<u>Do</u> request re-arrival of your MUCR if your airline/ITSF/Carrier/DEP is advising you that your export shipment has route 3/6 and is 'held', but your software is showing that your shipment has route 3/6 and P2P.	If your software is showing all declarations against an export shipment as having route 3/6 and P2P after you have delivered the goods to the frontier, but the Airline/ITSF/Carrier/DEP is advising you that the MUCR in question is route 3/6 but does not have P2P, please confirm status of MUCR in CDS and CHIEF. If both have P2P, request	Please confirm status of MUCR in CDS and CHIEF and if both have P2P, request for re-arrival of the MUCR.	KEL-604

Dos and don'ts		Because	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
		for re-arrival of the MUCR.		
29	<u>Do not</u> include "VATZ" in data element 6/17 at any item level when submitting CDS inventory linked Declarations for VAT Zero Rated exports and goods are consolidated into a MUCR.	You will not receive a clearance message if VATZ is input. Currently, the Inventory Linking Exports (ILE) system can only process numeric values in this DE. If "VATZ" is entered the message containing clearance may not be sent to the declarant.	Please contact your carrier to inform them of this issue and that you intend to take corrective action. Disassociate the DUCR from the MUCR, invalidate the declaration, and submit a new declaration using the same DUCR with a new LRN and reassociate, or if your software does not allow re-use of a DUCR, create a new DUCR. Please inform your carrier that they may need to re-arrive the MUCR.	KEL-616
Workaround in place until known issue for the CDS Exports User Interface (on GOV.UK) is fixed				
30	When attempting to complete any transaction involving a DUCR, avoid creating your DUCR using more than one hyphen.	Currently the CDS exports User Interface is not accepting DUCRs with more than one hyphen, even though they are accepted by CDS and CHIEF. Therefore, your transaction will error and you will be asked to use a valid DUCR	Invalidate your declaration and resubmit a new one with a new DUCR with no more than one hyphen.	N/A

*For more detail on route cause and remediation for any of the below issues, please look up KEL in [Known Error Workarounds for the Customs Declaration Service \(CDS\)](#).

4. Large MUCR Best Practice

We are aware that some traders have been experiencing slower than normal processing times in CDS Exports. This predominantly occurs with shipments requiring more than 99 declarations (i.e., more than 99 DUCRs associated to a MUCR).

We are investigating this and continue to explore ways to improve our processes. In the meantime, please take the steps described below:

- You can reduce the number of declarations you submit per shipment, by submitting a single declaration for 99 consignments if they fall under the same declaration category and are for the same exporter. This can be achieved by using each of the 99-line items available to account for each consignment. This will create less DUCRs for association under a MUCR if required.
- You can also reduce the number of DUCRs associated to a MUCR by creating additional bookings. For example, if you need to submit 150 individual declarations for a shipment you can create two bookings (MUCRs) each containing 75 DUCRs.
- Always finalise and close the MUCR before arrival at the UK border.
- If possible, we recommend that you make use of a Designated Export Place (DEP) to have your DUCRs arrived individually before they are consolidated into a MUCR.
- If you are arriving your shipment at an inventory-linked maritime location, you should not provide the MUCR reference to the carrier until it has been finalised and closed; this may be different to what you did on CHIEF.
- If you are arriving your shipment at an inventory-linked airport, and your software supports the Airline Delivery Schedule, we recommend that you produce this report before delivering your shipment to the airline or temporary storage facility.
- For arrivals at inventory-linked maritime ports, avoid creating a MUCR with a single Declaration Unique Consignment Reference (DUCR) and use the DUCR as a reference instead.

Please also note that to avoid any significant delays at the border, measures have been put in place to enable carriers and loaders to apply the manual release protocol where applicable.

5. Re-routing goods between locations that operate the Goods Vehicle Movement Service (GVMS), and inventory linked (IVL) locations

If you are informed, after submitting a declaration, that your goods will be re-routed (in either direction) between a Goods Vehicle Movement Service (GVMS) location and an inventory linked (IVL) location, you must follow the steps below. If you have already submitted your declaration by the time you realise that your goods are re-routing between a GVMS and an IVL location, follow the steps in column 3.

5.1 Best practice guidance for re-routing between GVMS and IVL locations

Table 2: Best practice guidance for pre-lodged CDS declarations being re-routed between GVMS & inventory linked locations (both directions) and actions to take to rectify issues.

Dos and don'ts		Because...	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
<i>I have submitted a CDS export pre-lodged declaration with GVMS details, but my goods are now being re-routed to an inventory linked location</i>				
1	If your software allows, <u>do</u> amend your declaration prior to arrival of goods at the border to remove the GVMS details (RRS01 AI Code and the GVMS Goods Location Code and update with the correct Goods Location Code (GLC) for the new location. If you are unable to amend your declaration, you will need to invalidate your CDS declaration and submit a new one.	Your declaration will be rejected on arrival. The declaration will be rejected and placed into a final state whereby no amendments are permitted.	If your goods have already been arrived at an IVL Port: - Resubmit a new declaration without GVMS details declared (do not include RRS01 AI Code and do not include a GVMS Goods Location Code), using the same DUCR reference and new LRN if your software allows. - If this is not possible, submit a new declaration without GVMS details declared, using a new DUCR reference. - Once you have submitted the new declaration, you must contact the loader/ carrier and ask them to re-arrive the DUCR (if the reference remains the same), or provide the new DUCR reference and ask for arrival.	N/A
<i>I have submitted a CDS export arrived declaration with GVMS details, but my goods are now being re-routed to an inventory linked location</i>				
2	No action required, for information only.	If a CDS arrived export declaration has been submitted with GVMS details and was intended for export via a GVMS arrived location, but is	N/A	N/A

Dos and don'ts		Because...	Actions to take if 'Dos and Don'ts' column could not be followed	HMRC Known Error Log ID (KEL)*
		then arrived at an inventory linked location, the declaration will process successfully.		
<i>I have submitted a CDS export pre-lodged declaration without GVMS details, but my goods are now being re-routed from an IVL to a GVMS location</i>				
3	If your software allows, <u>do</u> amend your declaration prior to arrival of goods at the inventory linked location. Add the GVMS details (RRS01 AI Code) and update with the correct Goods Location Code (GVMS code) for the new location.	You will not be able to create a GMR using any DUCR reference that does not include the full GVMS details. GVMS can only accept declarations that contain full GVMS detail within a Goods Movement Reference (GMR).	If your declaration has already been arrived at an IVL location and you need to move your goods to another location, you will need to submit a new declaration with the correct GVMS details and Goods Location Code (GLC) for the new location.	N/A
<i>I have created a MUCR and consolidated CDS arrived declarations with GVMS details, and my goods are being arrived at one of the following Dover DEPs; Motis or ChannelPorts before arrival at the GVMS location.</i>				
4	If you have consolidated your CDS arrived GVMS declarations into a MUCR and have created a GMR listing all DUCR references, your MUCR can be arrived at Motis or ChannelPorts before arrival at the GVMS location, without encountering any GVMS related issues.	HMRC have agreed a temporary arrangement that will allow the arrival of consolidations at Motis or ChannelPorts where goods are exiting the UK via either of the Dover GVMS locations.	You may notice that you do not receive a DMS notification (DMSEOG) immediately after the vessel carrying your goods has departed. This message will be returned to you between 24 – 72 hours later. If you have not received a DMSEOG after the 72 hours, we suggest you contact Motis or ChannelPorts ; where your consolidated goods were arrived. The DEP operator will then take the appropriate action.	N/A

**For more detail on route cause and remediation for any of the below issues, please look up KEL in [Known Error Workarounds for the Customs Declaration Service \(CDS\)](#).*

5.2 Port locations that use GVMS for imports only, which are also IVL

Port Location	Berth Name	Code
Felixstowe	Dooley Terminal	GBAUFXTFXTFXT
Harwich	Harwich International Port - Stena Line	GBAUHRWHRHHRW
Hull	Hull Ferry Terminal 1 - River Berth RoRo	GBAUHULHULHUL
Immingham	DFDS	GBAUIMMIMMIMM
Killingholme	Killingholme RoRo Berths	GBAUNKHIMMNKH
Port of Tyne	DFDS - North Shields	GBAUNSHTYNNSH
Purfleet	Purfleet RoRo Berths	GBAUPFTLONPFT
Teesport	PD Teesport	GBAUTEEMIDTEE
Tilbury	Tilbury 2 RoRo Berth	GBAUTILLONTIL

5.3 Ports locations that use GVMS for both imports and exports, which are also IVL

Port Location	Port Name	Location Code
Manchester	Manchester Ship Canal	GBAUMSCMNCMSC
Plymouth	Plymouth	GBAUPLYPLYPLY
Poole	Poole	GBAUPOOPOOPOO
Portsmouth	Portsmouth	GBAUPMEPTMPME
Tilbury	Tilbury	GBAUTILLONTIL

6. What to do if your pre-lodged declaration is cancelled, rejected or invalidated upon arrival

This section provides remedial actions to take if you receive a DMSREJ notification, given any of the following scenarios:

1. You have cancelled your CDS exports pre-lodged declaration.
2. Your CDS exports pre-lodged declaration was rejected, for example due to missing data elements.
3. Your CDS exports pre-lodged declaration was rejected on arrival, for example due to a reprocessing error.

Table 3: Best practice guidance for cancelled or invalidated pre-lodged CDS declarations (including upon arrival) and actions to take to rectify issues.

Scenario		Reason for error	Actions to take	HMRC Known Error Log ID (KEL)*
1	You have submitted a CDS pre-lodged export declaration that is not consolidated within a MUCR , and you receive a DMSREJ notification.	N/A	If your rejected declaration DUCR is arrived at an inventory linked location, the Airline/ITSF/Carrier/DEP will receive an error and the arrival will be rejected. You will need to do the following: 1. If your software allows, submit a new CDS declaration using the same DUCR but with a new LRN. If your software does not allow this, submit a new CDS declaration with a new DUCR reference (e.g. add an extra character to the end) 2. Inform the DEP/carrier and ask for a re-arrival of the same DUCR or arrival of the new DUCR to be sent. If you didn't cancel your pre-lodged declaration, but received a DMSREJ, this might be because the declaration had missing data elements. In this instance, amend the declaration, using the same DUCR and same LRN. When the CDS 'accepts' the declaration, then the new arrival,	N/A

			or re-arrival, will obtain a positive status update and no error.	
2	You have submitted a CDS pre-lodged export declaration that is consolidated within a MUCR , have cancelled it, and received a DMSREJ notification.	Currently the CDS does not automatically disassociate a cancelled pre-lodged CDS DUCR that sits under a MUCR (where the MUCR is included in the declaration or the DUCR is subsequently associated to a MUCR). This differs from CHIEF behaviour.	When you cancel a pre-lodged declaration on CDS, <u>do</u> immediately disassociate the DUCR's from the MUCR. You can do this using either: - CDS functionality provided by your software provider/CSP or, - The Exports Movement Service on gov.uk. Failure to disassociate a cancelled CDS declaration DUCR from the MUCR will error arrival of the whole MUCR. This will result in delays at the frontier as the arrival of a MUCR will error. If this happens, you will be contacted by the Shed operator/carrier asking you to take corrective instructions.	N/A
3	You have submitted a CDS pre-lodged export declaration that is consolidated within a MUCR and delivered to the frontier , and have now received a DMSREJ notification.	CDS does not automatically disassociate a pre-lodged CDS consolidated DUCR that is invalidated (rejected) upon arrival. This differs from CHIEF. Therefore, if one of your declarations is rejected on arrival due to a reprocessing error, the entire MUCR will be rejected on arrival as there is no auto-disassociation function.	If this scenario occurs, you will be notified by the loader/carrier that a CDS DUCR has been invalidated on arrival and you must take the following action: If you still want to move the goods... a. Contact the shed operator/carrier and advise the shed that you will be submitting a new declaration.* b. Disassociate offending DUCR using either; I. CDS functionality provided by your software provider/CSP or, II. the Exports Make and Manage a Declaration Service on gov.uk. c. Submit a new declaration with the correct details using the same or new DUCR**. d. Associate the DUCR back into the same MUCR e. Contact the shed operator/carrier and request re-arrival of the MUCR.	N/A

			If you no longer intend to export the goods under this MUCR... a. You will need to let the shed operator/carrier know this (and points b., c., d. and e. above will not apply). *If your declaration has been invalidated on arrival, you will be unable to amend it and it will need to submit a new declaration. **If you are unable to use the same DUCR due to software restrictions, you may need to create a new DUCR. Alternatively, you may be able to use the same DUCR reference but with a new LRN.	
--	--	--	--	--

**For more detail on route cause and remediation for any of the below issues, please look up the relevant KEL in the [Known Error Workarounds for the Customs Declaration Service \(CDS\)](#) guidance on GOV.UK.*

7. Raising a query regarding your CDS declaration

If you have any questions, including help with subscribing to CDS, [please contact us using one of these channels](#), or speak to your Account Manager or Customer Compliance Manager if you have one.

You can also [report a problem when using the CDS](#) on GOV.UK.

9. Appendix

9.1 CDS status of entry (SOE) codes

The below status codes will appear in CDS status notifications, and declaration queries. Note that error codes 13, 17, 19, 20, and 23 are not relevant to exports, hence not in the below view.

CDS Status	CDS Code	CDS Description	CHIEF equivalent SOE	Comments
Not Available NB For use during Exports Dual Running (EDR) only.	NA	Arrived at a different location to that pre-lodged or error detected by OGD system.	SOE E	
Declaration does not exist	0	The declaration does not exist.	SOE 0	
Declaration Validation	1	The declaration is currently within validation and is not yet accepted, registered or rejected. This code will be received for any initial linking of the declaration to the consignment on the inventory.	SOE 1	Declaration update triggers an EMR/ERS.

Declaration Goods Release	2	This status will be received once the declaration has a positive customs position but either control or the debt is provisional. However, the goods can be released. This will be received as part of a Declaration Status Notification.	SOE 7	Declaration update triggers an EMR/ERS.
Declaration Clearance	3	This status will be received once the declaration has a positive customs position, and the control/debt is finalised. Most declarations will move to this status and skip release. This will be received as part of a Declaration Status Notification.	SOE 7	Declaration update triggers an EMR/ERS.
Declaration Invalidated (at trader's request)	4 (ICS 3)	This status will be received as part of a Declaration Status Notification once the decision has been taken to invalidate the declaration. The ICS code will distinguish between a trader-initiated cancellation and a seizure/destruction of goods cancellation. The declaration will be auto disassociated if it is contained within a MUCR.	SOE 9 (ICS 92)	Declaration update triggers an EMR/ERS. Declaration cancelled by HMRC. This is a final declaration status.
Declaration Invalidated	4 (no ICS)	This status will be received as part of a Declaration Status Notification once the decision has been taken to invalidate the declaration.	SOE 4 (no ICS)	Declaration update triggers an EMR/ERS. This is a final declaration status.
Declaration Invalidated (by customs due to major discrepancies)	4 (ICS 6)	This status will be received as part of a Declaration Status Notification once the decision has been taken to invalidate the declaration. The ICS code will distinguish between a trader-initiated cancellation and a seizure/destruction of goods cancellation. The declaration will be auto disassociated if it is contained within a MUCR.	SOE 9 (ICS code anything other than 92 or 93)	Declaration update triggers an EMR/ERS. Declaration terminated. This is a final declaration status.
Declaration Rejected	5	If the declaration is rejected, then a Declaration Status Notification will be received with this code. The declaration will not be auto disassociated if it is contained within a MUCR.	SOE R	Declaration update triggers an EMR/ERS. This is a final declaration status.
Declaration Handled Externally	6	This status will be received as part of a Declaration Status Notification once the decision has been taken to take the declaration off system. This will occur in	SOE 9 (ICS 07)	Declaration update triggers an EMR/ERS.

		exports when goods are stopped/seized at the Office of Exit (whether through another member state, or via a re-arrival within the UK). This can occur at any time following presentation of the goods for export and when the goods are on-hand. Actions may vary between formal detention of the consignment and possible seizure action by Customs. The declaration will be auto disassociated if it is contained within a MUCR.		Declaration seized.
Subject to Customs approval of amendment, query or cancellation request. NB for use during EDR only.	7	Subject to Customs approval of amendment, query or cancellation request.	SOE 4	Cancellation requested by trader.
Advance Declaration Registration	8	The declaration has been successfully registered.	SOE 1	ROE H.
Declaration Acceptance	9	The declaration has now been legally accepted.	SOE 1	ROE H.
Declaration Acceptance at Goods Arrival	10	The declaration has successfully passed re-validation at the point of arrival.	SOE 1	Allocated ROE 1, 2, 3 or 6.
Declaration Rejection at Goods Arrival	11	If the declaration fails re-validation at the point of arrival, then this notification will be sent to CSPs. While the declaration is rejected, the DUCR will remain in a holding state, still associated to a consolidation if relevant. Traders are then expected to submit a new declaration with the DUCR from the rejected declaration. This will allow the consignment to progress through the inventory system. The declaration will not be auto disassociated if it is contained within a MUCR.	SOE R	Declaration update triggers an EMR/ERS. This is a final declaration status.
Declaration Corrected	12	The declaration has now been amended successfully including derived customs value.	SOE 1	Allocated ROE H, 1, 2, 3 or 6.
Declaration Risked	14	Notification that the declaration has now been risked and will contain a specific ROE code.	SOE 1	Declaration update triggers an EMR/ERS.

				Allocated ROE 1, 2, 3 or 6.
Customs Position Determined	15	The customs position on the declaration has now been determined following Risk and Case results. The declaration can now be cleared or seized as required.	SOE 1	Allocated ROE 1, 2, 3 or 6.
Declaration Clearance after Goods Release	16	Goods have now been cleared after release. For example, goods were previously released with only a non-blocking control task open; now the non-blocking control task has been closed.	SOE 7	
Declaration Received	18	The declaration has just been received and is in a stage prior to validation. The declaration is not yet accepted, registered or rejected.	SOE 1	ROE H.
Goods Exit Results Received	21	A departure (indirect or direct) for the declaration has been attempted for the first time.	SOE 8	
Completed Successfully	22	The departure has been successful, and the declaration has completed.	SOE 8	
Manual Task Raised	24	A manual task has been raised that needs to be looked into to resolve an open control task.	SOE 1	
Departed	D	The declaration has been departed.	SOE 8	
Frustrated	F	The declaration has been frustrated (inland departure).	SOE D	
MUCR Values				
Consolidatio n is Open	0	The MUCR has been created and contains declaration but is still open.	SOE 0	
Consolidatio n but contains no declarations	0	The MUCR has been created but contains no declarations.	SOE E	
Consolidatio n is closed but does not have P2P	C	The consolidation is closed, but there are underlying declarations that do not have P2P.	SOE 1	
Consolidatio n has P2P	3	The consolidation is closed, and all underlying declarations have P2P or have departed.	SOE 7	

9.2 CDS DMS Notifications

Below are the possible trader notifications that the CDS might return. Where a notification type is applicable to only Imports or Exports, this is indicated.

DMS Code	Notification Type	Description	Mapping to CHIEF Equivalent
01	DMSACC	The declaration has been legally accepted	Contained within E2 and X2
02	DMSRCV	The message has been registered. This can apply to pre-lodged declarations as well as additional messages.	H2/P2
03	DMSREJ	The received message has been rejected. This can apply to declarations and additional messages.	Cancellation Refusal: N3/S3
05	DMSCTL	Customs intends to physically examine the goods. This will only be received when the goods are on hand.	E1 (Imports) / X1 (Exports)
06	DMSDOC	The declarant needs to present one or more documents related to the declaration.	Contained within E2
07	DMSRES	Corrections have been applied to the declaration by the trader, or as a result of physical inspection by customs (latter not likely to be triggered).	N/A
08	DMSROG	The goods can now be released. Note that this is different to clearance as it implies that the debt calculated is not yet finalised.	Currently implied by N5 / IVL notification
09	DMSCLE	The declaration is now cleared, and by implication, the goods can be released.	Contained in N5 report if non-inventory linked. If inventory linked, trader will receive a notification from the inventory system.
10	DMSINV	The declaration has now been cancelled. This can be as a result of a trader-initiated invalidation, or system-initiated.	Cancellation Approval: N4/S4 Goods Disposal Advice: S9

11	DMSREQ	The additional message submitted to customs has been accepted or denied. In the case of a denial, the reason is indicated.	N3/S3, N4/S4
13	DMSTAX	IMPORTS ONLY. Information on the indicative calculation or duties liable with this message. Indicative calculations, sent before the dwell time, provide traders with opportunity to preview the duty calculation and make amendments to the declaration as necessary to rectify completion errors, or cancel and resubmit. Calculations made following the debt calculation stage (after the dwell time concludes) will confirm the payable amount and either inform on what has been reserved against a deferment account or similar method of payment. Alternatively, it can be used as a payment instruction for immediate methods of payment. In the immediate payment scenario, a payment reference is also provided.	Contained within E2
14	DMSCPI	IMPORTS ONLY. There is an insufficient balance against a deferred method of payment. The relevant financial party will need to take action to rectify the situation before the goods can be released.	E9 and X9
15	DMSCPR	IMPORTS ONLY. A reminder regarding the need to take action on the insufficient balance against a deferred method of payment. It can also be used as a reminder to make an immediate payment.	N/A
16	DMSEOG	EXPORTS ONLY. The goods have now exited the customs union.	Indicated by ECS via IE518
17	DMSEXT	The declaration needs to be handled manually. Only used in exceptional circumstances where the system cannot handle the declaration.	N/A
18	DMSGER	EXPORTS ONLY. The exit results have not yet been received by the Export system. This could be a trigger to submit an alternative proof of exit.	S0

50	DMSALV	IMPORTS ONLY. A decision has been made by Defra that will delay clearance of the goods.	Contained within E0
51	DMSQRY	A query has been raised on the declaration by Customs, advising that caseworker has sent a secure message and is awaiting action by the submitter. The DMSQRY notification message does not include the source or contents of the secure message - this is only accessible via the user interface of the Secure File Upload service.	N/A

9.3 Recommended Data Element completion criteria

The below table relates to Section 1, Row 10, whereby the following criteria is recommended to avoid departure irregularities due to this specific issue.

Data element	Title	Recommended completion criteria
6/14	Commodity Code	Must be string of up to 8chars.
6/16	Commodity Code - TARIC code	Must be exactly 4chars.
6/12	UN Dangerous Goods Code	Must be exactly 4chars.
3/10	Consignee Number	Number must commence with country prefix.
